

Three decades of quality.

Poly Flex keeps strong after 30 years in business.

Poly Flex Group Pty Ltd manufactures a large range of Anti-vibration Engine Mounting Systems and Shaft Couplings for the Marine, Agricultural, Mining and Power Generation Industries.

For Poly Flex 2011 will be a major milestone reaching the big 30. For any business 30 years is an accomplishment to be observed. For a small business shipping quality product from Australia to the world this achievement is to be celebrated. Through their factories in Clontarf Queensland and sent across the world to agents and customers Poly Flex products continue to be the preferred products for the marine industry.

With a worldwide distribution system Poly Flex can quickly service their customers' needs with well-informed local people dealing direct with their customer base and still having the backing of the manufacturers of the product. With established agents in the US, UK, Asia, South America, Canada, Middle East, New Zealand and Europe Poly Flex can handle most product requirements quickly and efficiently. Local companies and distributors are able to service the needs of their customers with the same full backing of Poly Flex. For technical information, product specifications and advice you can contact Poly Flex direct via the website, email or phone.

With the new CNC machining centre in place for a year Poly Flex has improved the manufacturing of our components and fine-tuned some products to create even better products for their range. Moulded from engineering grade, heat cured polymer alloys which are long lasting, resistant to oil and fuel, all Poly Flex products are manufactured to the highest standard with performance and quality their main objectives.

The extensive range includes anti-vibration mounting systems, marine shaft couplings, rudder bearings, hull to deck joining systems and CNC machined steel half couplings along with an increasing range of customised polymer mouldings. We also have the capacity to design and manufacture products to solve many problems all to the same Poly Flex High standard of practice.

The global economic downturn has made everyone rethink their ways of doing business and having to come up with creative ideas to stay on the mind of the consumer has been a challenge over the last year. After much demand from customers over the years Poly Flex has diversified and added a large range of marine parts and leisure equipment under the Superior Marine Group (SMG) banner.

Poly Flex and their distributors have continued to successfully exhibit at international boat shows as well as numerous local shows throughout Australia and overseas. They pride themselves on taking the time to discuss with their customer exactly what they want and supply them the best possible product to achieve this.

DNV Type Approval certification is available on the engine mounts and couplings in the range plus also holding defence supply approval (DMO – Defence Materiel Office). DNV (Det Norske Veritas) is the internationally recognised leader for certification for survey vessels around the world.

Poly Flex, the market leaders in Polymer Technology in marine and industrial vibration isolation systems.
